

A collage of images showing modern houses with green roofs, a tennis court, and a basketball court, all set in a lush green landscape.

# Six Leaves Estate

Mini City

# Six Leaves Estate

Six Leaves Estate redefines ultra-private luxury living through a self-contained enclave of six exclusive residences engineered for complete environmental autonomy. The project is designed as a modern mini-city where sustainability, privacy, and architectural elegance are central to the lifestyle offering.

The development integrates six bespoke homes supported by shared regenerative ecosystems, including solar energy infrastructure, geothermal climate systems, and closed-loop rainwater harvesting. Each residence is structured to function independently while remaining part of a harmonious collective, offering long-term resilience, low-impact luxury, and refined comfort within a nature-rooted setting.

The pre-development package provides a structured foundation for execution, including phased infrastructure planning, operational frameworks, proprietary branding assets, and comprehensive masterplan documentation. Six Leaves Estate is intended to function as a landmark model of autonomous luxury, combining eco-engineered living, biophilic design, and long-term investment potential within a cohesive residential concept.

## Autonomous Elegance

Six Leaves Estate represents a high-value development opportunity within the sustainable ultra-luxury residential market. The project's combination of six private residences, renewable energy systems, and closed-loop environmental infrastructure is designed to deliver long-term asset appreciation through scarcity, privacy, and next-generation self-sufficiency. The estimated project value is €950.000,00.

## Properties

- 1 A limited collection of six bespoke homes designed with spacious layouts, secluded access, and refined architectural detailing for exclusive long-term living.
- 2 Solar arrays, geothermal heating and cooling, and integrated rainwater harvesting enabling autonomous operation with minimal external dependency.
- 3 Rammed earth structures, reclaimed timber finishes, living green roofs, and biophilic interiors minimizing environmental impact while elevating luxury design.
- 4 Thoughtfully separated residences and serene landscaped buffers ensuring calm, secure, and highly personal environments within a collective estate.
